

# PLANTING SCHEDULE

The spacing of plants shown on plan have been derived as a compromise between growth rate, anticipated size, and the ability to provide a good vegetative cover within a reasonable space of time. Quantities indicated have been based on the spacing of individual plants appropriate to the available area for the particular species used, where this available area increases (or decreases) through the course of construction, quantities may also need to increase (or decrease) to maintain the plant spacings indicated on plan.

AGLA recommends early plant procurement to ensure species availability and minimum plant sizes.

CODE	BOTANICAL NAME	COMMON NAME	SIZE**	QUANTITY	SPACING	HEIGHT*	WIDTH*

### \*HEIGHT AND WIDTH:

Heights and widths as shown are at full maturation, indicative only and dependent on environmental and microclimatic factors

### \*\* PLANT CONTAINER SIZE:

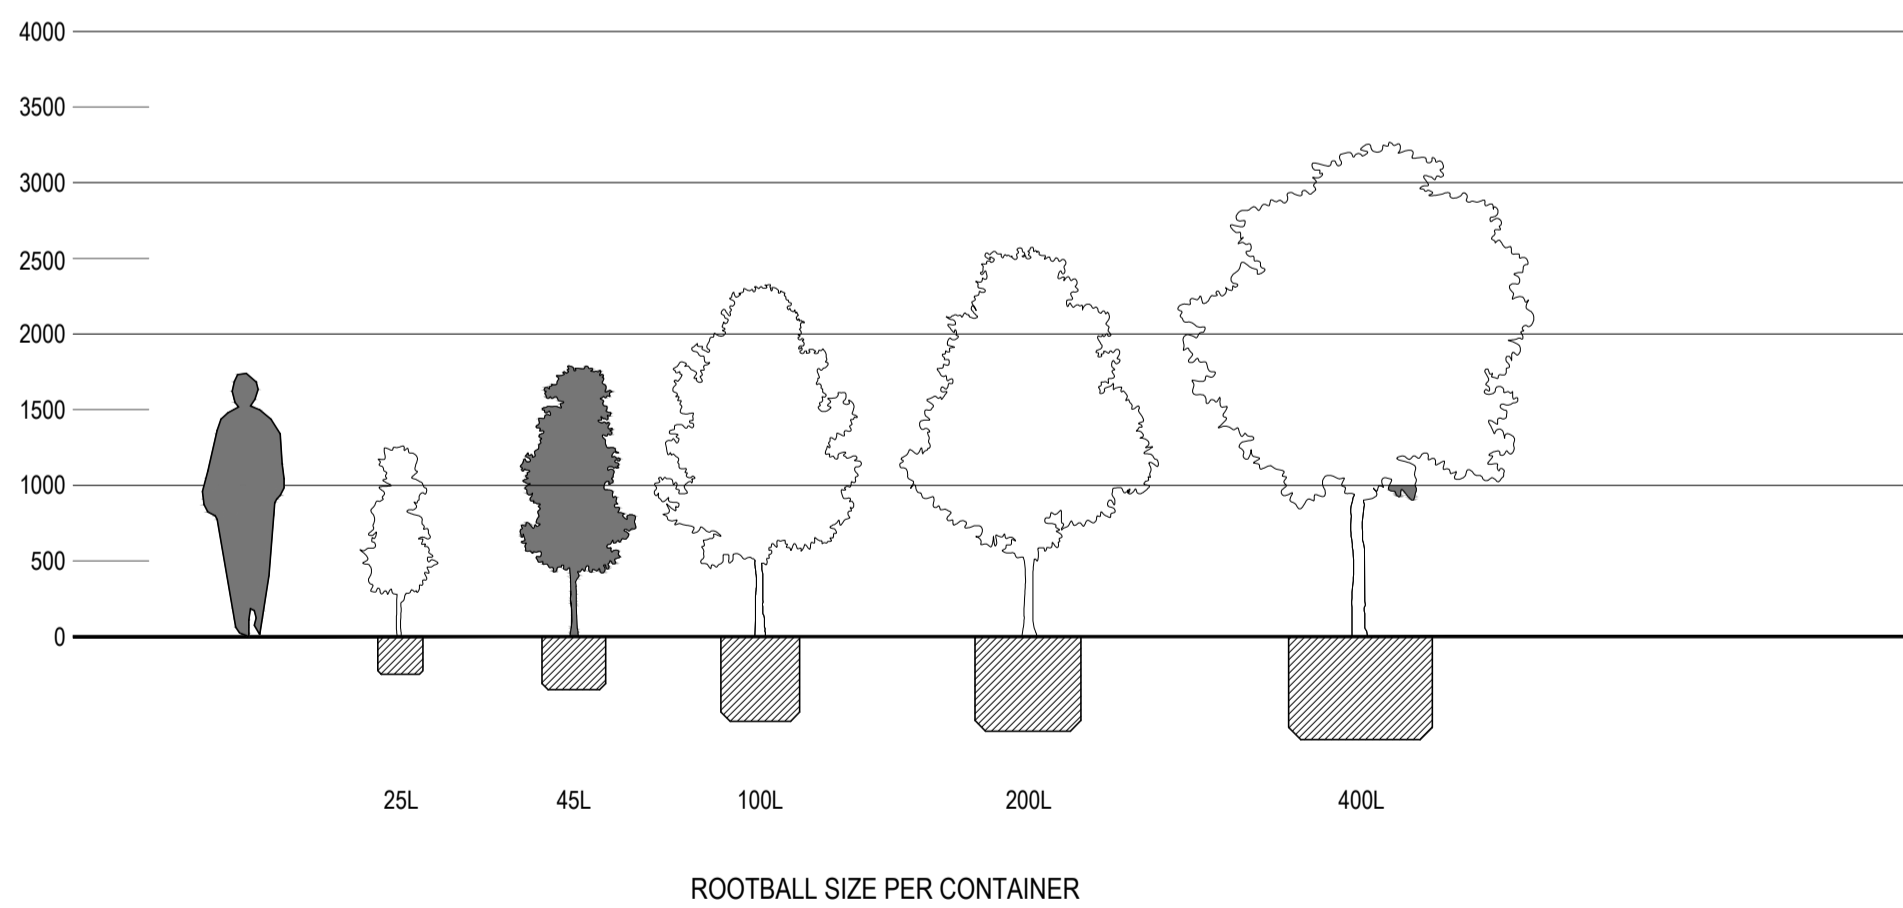

45L	45 Litre container stock min
200mm	200mm dia minimum pot size
140mm	140mm dia minimum pot size

### MINIMUM STOCK SIZES

The recommended minimum plant size relative to the container size is as follows. Should the stem calliper of height of the tree relative to the container size be less than the figures shown, the tree should be rejected. Ensure minimum plant height at time of planting for the specified container stock unless otherwise agreed to by the landscape architect due to availability, species type and/or time of season.

Root ball volume	Height (above container)	Calliper (at 300mm)	Clean trunk height
45 litre	1.9 - 2.3 metres	30mm - 35mm	1200mm

The following is a guide, final plant sizes due to availability, species, type, and/or time of season.
