Rural Re-Seals Program

Reseals of the rural area are still being considered, with the majority of funding being allocated for improvements within this program. There is expected to be around \$100,000 per year available for resealing of rural roads in this program.

Urban Re-Seals Program

Reseals and sealed rehabilitation have been identified within the external inspection and rating report prepared for Council by IMG. The inspection involved laser testing of the pavement and based to determine the roads that were to be prioritised.

Gravel Re-sheeting

Re-sheeting segments have been identified as a result of visual inspections of the proposed roads to be treated. Holes were drilled in the gravel pavement in every segment, one hole out towards the shoulder and one in the centre of the road. The average depth was then assigned to each segment. This program has been put together looking at the minimum average depth of gravel.
